

Editorial Office Assistance (EOA)

Making Your Journal's Peer Review Seamless

Premium journal publishers get thousands of article submissions to their journals every year, and with that come some core challenges. If the manuscripts are not reviewed and assigned to the right journal, structured poorly, and go unchecked before peer review, it results in wastage of time and resources. Some key steps in the process are maintaining quality standards of the journal, ensuring language and overall text is adequate, appropriate adequacy and appropriateness of the content, and avoiding plagiarism.

That's where our EOA services come in. Our team of Subject Matter Experts (SMEs) will take on the responsibility of successfully carrying out the key tasks, enhance the relationship between the author and the reviewer, and optimize the publishing process.

Benefits

-  A dedicated team of SMEs
-  Reduced TAT for peer review
-  Optimized production processes
-  Enhanced acceptance rates
-  Rationalization of onshore operating costs

Solution

MARS (Manuscript Assessment and Reporting System) is an automated online platform powered by machine learning (ML) to evaluate and score manuscript content, to identify possible errors, and to generate a manuscript assessment summary assisting authors and publishers to fix possible errors before peer review

Facts
