

Lumina Authoring & Publishing System

A unique configurable production workflow management system for books, loose-leaf publications, and newsletters with a built-in authoring tool and a robust project management & tracking system.

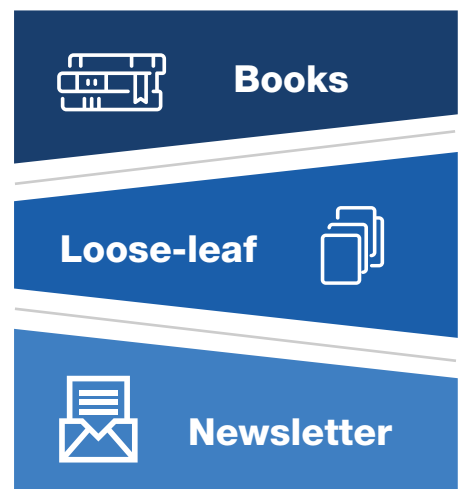

To enhance publishing efficiencies, technology and automation have to work hand-in-hand to deliver a highly dynamic publishing workflow.

Whether bound books, loose-leaf publications, or newsletters, publishing workflows have to manage complex processes, which include adhering to guidelines prescribed by publishers, working closely with authors to finalize the content, and driving the entire production process to ensure final content delivery across print and digital platforms.

These inherent process complexities often lead to challenges related to author management, production delays, and coordination issues across multiple workflow tracks, which result in cost overruns.

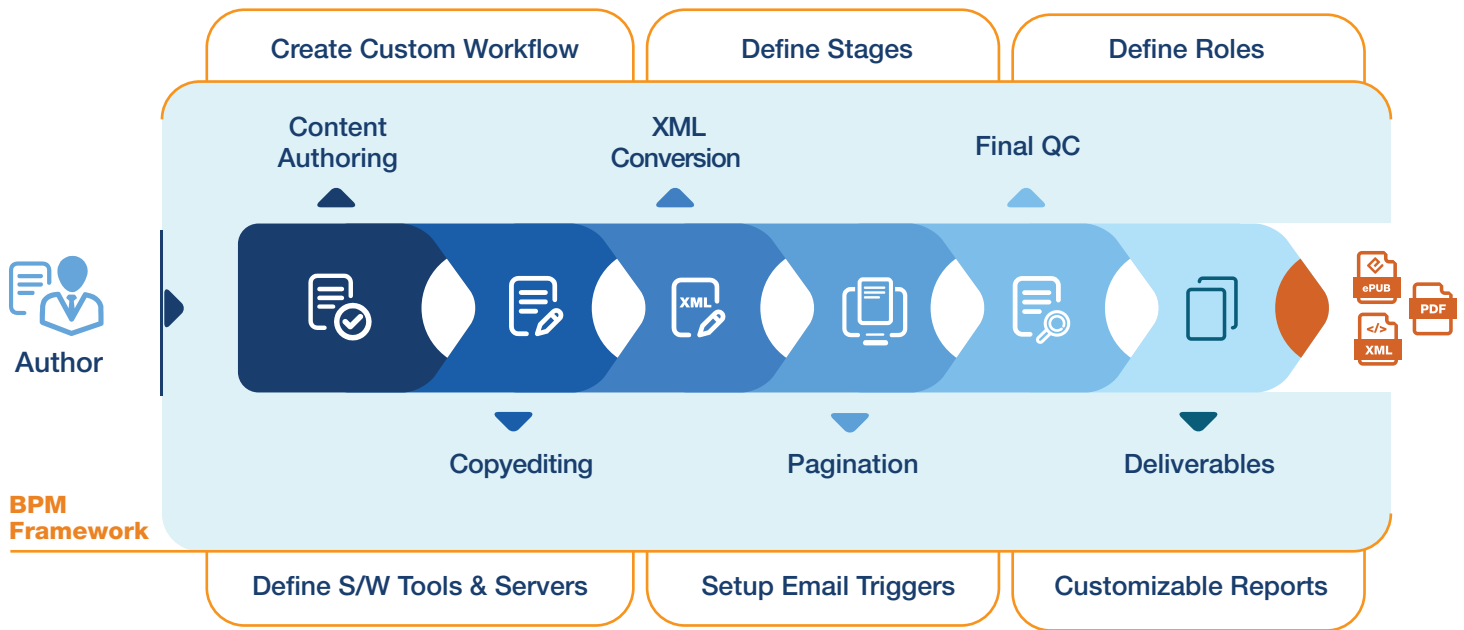

The workflow management system must be able to deal with all these challenges, ensure on-time deliveries, content integrity, transparency, and facilitate collaboration between the vendor, author, and the publisher.

This is where LAPS makes the difference.

LAPS is a unique workflow solution that enables management and automation across multiple publishing workflows.

Lumina Authoring Publishing System

KEY FEATURES

- A configurable BPM framework for workflow customization
- Ability to handle books, loose-leaf publications, and newsletters/magazines workflows
- Processing unique loose-leaf requirements
- Defining stages and roles
- System-driven email notifications on the completion of each stage
